

Supplementary Table 4. Estimated mean change in log value of HCV RNA after treatment in patients who did not achieve end-treatment response and sustained virologic response

Time point	Estimated mean (log IU/mL)	SE	95% CI	<i>P</i> compared with baseline	<i>P</i> compared with 4 weeks	<i>P</i> compared with EOT
Baseline	5.973	0.276	5.395–6.551			
4 weeks	3.726	0.145	3.422–4.029	<0.001		
EOT	3.390	0.075	3.232–3.547	<0.001	0.115	
24 weeks	4.788	0.140	4.495–5.082	0.028	<0.001	<0.001

HCV, hepatitis C virus; SE, standard error; CI, confidence interval; EOT, end of treatment.
