

Supplementary Table 5. Sensitivity analysis of Liang score to predict HCC risk of cirrhotic and non-cirrhotic patients in the validation cohort

	Cirrhotic patients	Non-cirrhotic patients
Sensitivity	91.7 (71.5–98.5)	83.3 (36.5–99.1)
Specificity	42.6 (39.4–45.9)	68.9 (67.2–70.4)
NPV	99.5 (98.0–99.9)	99.9 (99.7–99.9)
PPV	4.0 (2.6–6.0)	0.5 (0.2–1.2)
No of high risk patients	554 (58.3)	1,040 (31.2)
HCC predicted	22 (91.7)	5 (83.3)

Values are presented as percentage (95% confidence interval) or number (%).

HCC, hepatocellular carcinoma; NPV, negative predictive value; PPV, positive predictive value.
