Supplementary Figure 3. Cholestatic liver fibrosis mice by feeding of the 0.1% DDC-supplemented diet for 2 weeks, 4 weeks. The representative images of hepatic H&E staining and Masson's trichrome staining (A). Scale bars, 100 μm. RT-PCR of hepatic collagen 1 (B), TIMP-1 (C), TGF-β (D) and TGR5 (E). mRNA levels in liver tissues. Data shown are the mean±SEM. TGR5, GPBAR1; DDC, 3,5-diethoxycarbonyl-1,4-dihydrocolidine. *P<0.05, **P<0.01, ***P<0.005 compared with the control group.
