

Supplementary Figure 2. KCTD17 promotes HCC proliferation, migration and drug resistance. (A, B) Kctd17 expression in control or Kctd17 knockout Hep1c1c7 cells (A), or doxycycline (Dox)-inducible KCTD17 knockdown Hep3B cells (B). (C) Western blot in lysates from control or Kctd17 overexpressing Hep1c1c7 cells. (D) The effect of chemoresistance by Kctd17 overexpression. Control or Kctd17-overexpressing cells were treated with different dosages of 5-FU for 48 h, followed by cell proliferation assay. ** $P < 0.01$, *** $P < 0.001$ as compared to the indicated control by two-way ANOVA. All data are shown as the means \pm s.e.m.
