

Supplementary Table 4. Comparison of complications according to the IPV value in the normal GFR and AKI groups

Variables	Normal GFR group at LT time			AKI group at LT time		
	Higher CV (≥ 37.7) (n=237)	Lower CV (< 37.7) (n=237)	P-value	Higher CV (≥ 42.2) (n=69)	Lower CV (< 42.2) (n=91)	P-value
Rejection	15 (6.3%)	18 (7.1%)	0.859	8 (11.6%)	7 (7.7%)	0.572
Graft survival	181 (76.4%)	218 (86.5%)	0.006	45 (65.2%)	80 (87.9%)	0.001
Critical infection	8 (3.4%)	4 (1.6%)	0.325	5 (7.2%)	5 (5.5%)	0.747

IPV, inpatient variability; AKI, acute kidney injury; GFR, glomerular filtration rate; LT, liver transplantation; CV, coefficient of variant.
