Supplementary Table 8. The univariate and multivariable Fine-Gray sub-distribution hazard regression model for the prediction of HCC in all chronic liver disease patients from Taichung Veteran General Hospital

Variable	Univariate			Multivariable		
	Crude SHR	95% CI	*P*-value	Adjusted SHR	95% CI	*P*-value
Age, 1 year increase	1.03	1.02–1.04	<0.001	1.00	0.99–1.01	0.840
Male vs. Female	1.91	1.31–2.78	<0.001	1.70	1.16–2.49	0.006
Albumin, 1 g/dL increase	0.67	0.54–0.82	<0.001	1.08	0.84–1.40	0.550
SAFE score						
≥100 vs. <100	6.99	4.68–10.40	<0.001	7.13	4.45–11.40	<0.001

HCC, hepatocellular carcinoma; SAFE, Steatosis-Associated Fibrosis Estimator; SHR, sub-distributional hazard ratio; CI, confidence interval.
