Supplementary Table 9. The univariate and multivariable Fine-Gray sub-distribution hazard regression model for the prediction of HCC in MASLD patients from Taichung Veteran General Hospital

Variables	Univariate			Multivariable		
	Crude SHR	95% CI	*P*-value	Adjusted HR	95% CI	*P*-value
Age, 1 year increase	1.04	1.01–1.07	0.002	1.02	0.99–1.05	0.280
Male vs. Female	6.05	1.81–20.2	0.004	5.61	1.66–19.0	0.006
Albumin, 1 g/dL increase	0.69	0.42–1.14	0.150	1.15	0.55–2.39	0.700
SAFE score						
≥100 vs. <100	4.03	1.83–8.86	<0.001	3.18	1.22–8.27	0.018

HCC, hepatocellular carcinoma; MASLD, metabolic dysfunction-associated steatotic liver disease; SAFE, Steatosis-Associated Fibrosis Estimator; SHR, sub-distributional hazard ratio; CI, confidence interval.
