
Supplementary Figure 3. Tumor-infiltrating CD8$^+$ T cells in murine HCC exhibit exhaustion-related signature. (A) The expression of TIGIT and CTLA4 in splenic CD8$^+$ T cells and tumor-infiltrating CD8$^+$ T cells from 1-week and 2-week Hepa1-6 tumors was measured by flow cytometry. n=5 mice per condition. (B) The percentage of terminally exhausted CD8$^+$ T cell subset (PD-1$^+$ TIM-3$^+$) in tumor-infiltrating CD8$^+$ T cells from 1-week and 2-week Hepa1-6 tumors. n=5 mice per condition. (C) The expression of TIGIT and CTLA4 in splenic CD8$^+$ T cells and tumor-infiltrating CD8$^+$ T cells from 8-week and 9-week HTVi tumors was measured by flow cytometry. n=3 mice per condition. (D) The percentage of terminally exhausted CD8$^+$ T cells subset (PD-1$^+$ TIM-3$^+$) in tumor-infiltrating CD8$^+$ T cells from 8-week and 9-week HTVi tumors. n=3 mice per condition.
